

Team Roster & Preliminary Approach

Team Members

Navtesh Nijhawan

Year 2 — Computer Science with a Minor in Economics

Specializes in machine learning, data analysis, and software development. Navtesh has experience working on AI-driven and data-focused projects involving predictive modeling and analytical systems. He will focus on data processing, analytics, and dashboard development.

Simarjot Singh

Year 3 — Computer Science and Mathematics

Software Developer at DarkVision with experience in software engineering, problem solving, and collaborative development environments. Simarjot brings strong technical expertise, attention to detail, and communication skills, contributing to dashboard implementation and project organization.

Kritarth Panwar

Year 2 — Computer Science

Has experience working on projects involving database management and data analytics, along with participation in several case competitions. Kritarth brings strong skills in strategic thinking, teamwork, data organization, and presentation, contributing to dashboard usability, insight communication, and analytical interpretation.

Preliminary Approach

Our team plans to develop an interactive analytics dashboard using Tableau to transform raw data into clear, actionable insights. The dashboard will focus on usability, visual clarity, and effective storytelling to help users easily interpret trends, patterns, and key metrics.

Key Features

- Interactive charts and visualizations
- Dynamic filtering and categorization
- Trend analysis and comparative insights
- Clean and user-friendly dashboard design
- Insight-focused summaries for decision making

Workflow

1. Data cleaning and preparation
2. Exploratory data analysis
3. Dashboard development and visualization in Tableau
4. Capturing screenshots of key graphs and visuals to explain insights and design choices during the final presentation
